

INVITATION TO ATTEND WEBINAR

OPRA Turbines is a leading developer and manufacturer of advanced radial gas turbines and gas turbine powered generator sets utilized for industrial and oil & gas applications. We are pleased to invite you to join our webinar on trigeneration applications. Register to hear about the technology from OPRA Turbines with case studies and feasibility studies from Application Engineers. Familiarize yourself with smaller gas turbine technology and gain ideas and solutions for trigeneration system in different industries. You are welcome to pass on this invite to anyone you feel might find this interesting.

The OP16 Gas Turbine and Trigeneration Applications

Feasibility studies and a case study on the benefits of installing trigeneration system with the OP16 turbine.

Date: Wednesday, June 21, 2017
Duration: 45 minutes
Price: Complimentary
Presenter: Miguel Ángel Marimón Sarmiento (*Application Engineer Opra Turbines*)
Time: The presentation will be held twice for different time zones.
Please select the time that suits you best.

SESSION 1

Amsterdam 10.00AM
New York 4.00AM
Jakarta 3.00PM

Password: *OP16session1*

SESSION 2

Amsterdam 5.00PM
New York 11.00AM
Jakarta 10.00PM

[Click here to register for Session 2](#)

Password: *OP16session2*

Key learning objectives:

- Learn about trigeneration technology and its potential applications.
- Learn about the different trigeneration configurations with the OP16 turbine (Integration with thermally activated refrigeration system).
- Learn about economic feasibility and primary energy saving of a trigeneration system using the OP16.
- Learn about fuel flexible and clean gas turbine power.
- Learn about the advantages of a trigeneration system with the OP16 gas turbines in the dairy, breweries, food processing plants and commercial sector.

There will also be a live Q&A at the conclusion of the presentation. For more information, please don't hesitate to send an email to webinar@opraturbines.com.
