

## INVITATION TO ATTEND WEBINAR

OPRA Turbines is a leading developer and manufacturer of advanced radial gas turbines and gas turbine powered generator sets utilized for industrial and oil & gas applications. We are pleased to invite you to join our webinar on combined heat and power (CHP) in the ceramics industry. Register to hear about the technology from OPRA Turbines with case studies and feasibility studies from Application Engineers. Familiarize yourself with smaller gas turbine technology and gain ideas and solutions for cogeneration at ceramics plants. You are welcome to pass on this invite to anyone you feel might find this interesting.

### The OP16 Gas Turbine and Cogeneration at Ceramics Plants

Feasibility studies and a case study on the benefits of installing CHP in the ceramics industry

**Date:** Thursday, April 6, 2017  
**Duration:** 45 minutes  
**Price:** Complimentary  
**Presenter:** Stella Spazzoli (Application Engineer)  
**Time:** The presentation will be held twice for different time zones. Please select the time that suits you best.

#### SESSION 1

Amsterdam 10.00AM  
New York 4.00AM  
Jakarta 3.00PM

Password: *OP16session1*

#### SESSION 2

Amsterdam 5.00PM  
New York 11.00AM  
Jakarta 10.00PM

[Click here to register for Session 2](#)

Password: *OP16session2*

#### Key learning objectives:

- Learn about CHP at ceramics plants, exemplified by a feasibility study.
- Learn about the advantages of combined heat and power (CHP).
- Learn about the basic layout of a CHP system and its integration in the ceramics industry.
- Learn about fuel flexible and clean gas turbine power.
- Learn about the advantages of CHP with the exhaust from OP16 gas turbine.

There will also be a live Q&A at the conclusion of the presentation. For more information please don't hesitate to send an email to [webinar@opraturbines.com](mailto:webinar@opraturbines.com).
